

Digital Accident Log Workflow

(Near miss) accidents and First Aid Services at work must be comprehensibly recorded and sustainably documented. In this way the necessary **preventative and corrective actions** for daily work routines can be determined as part of effective risk management. Using the **First Aid book Software** from **iManSys** you can record and manage all incidents centrally in one database.

Digital First Aid book with iManSys

With the use of our software world **Risks & Hazards** many of the work steps for the reporting of incidents as well as the maintenance of the First Aid book can be digitised and automated. For example:

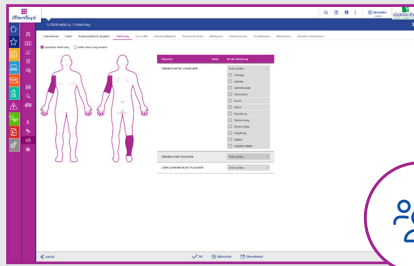

Your advantages with iManSys

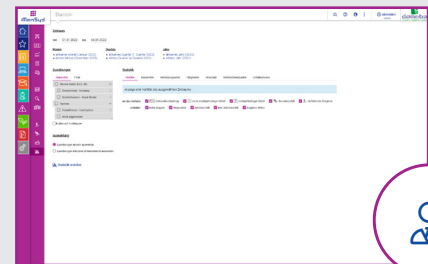

Digital Accident Log Workflow

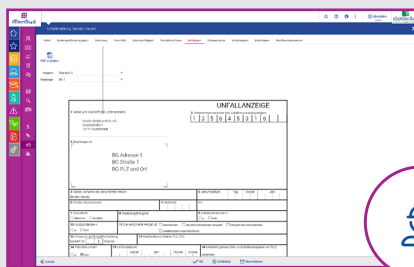

Creating the accident report for all incidents in the company

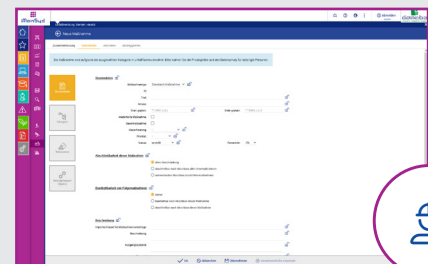

Checking all entered (near miss) accidents incl. filter options

Creating the accident report for the employer's liability insurance with all the necessary information

Organisation and assignment of actions for all employees

Documentation of all incidents as well as actions in the company
