

Audit Management Workflow

In order to have functioning quality management in the company it is necessary to conduct regular reviews. This generally happens using systematic audit management. With **iManSys** you can create audits, categorise and document them. The software guides you through the whole process from the audit plan through to actions and post-audits.

Audit management with iManSys

With the use of our software world **Actions & Obligations** many work steps for audit management, as well as the organisation of audit documents, can be digitised and automated. For example:

Your advantages with iManSys

Effective support of the person responsible for the audit process

Simple time management and scheduling of audits

Individual check-lists for the rapid processing of processes

automatic generation of audit reports

Strategic tracking of non-conformities and actions

Sustainable improvement of the completion of client audits

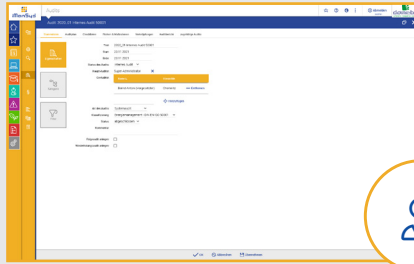

Improved information density through visualisations

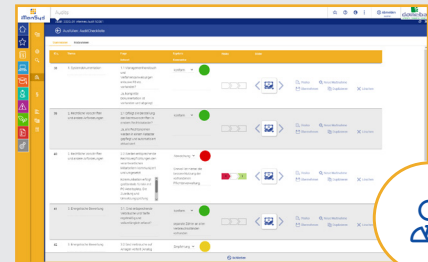

Audit Management Workflow

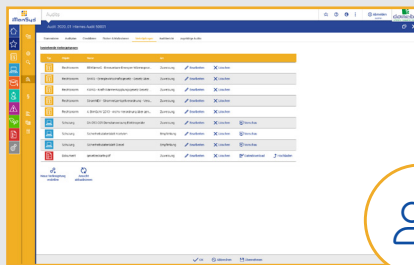

Planning the audit - find a date and invite participants

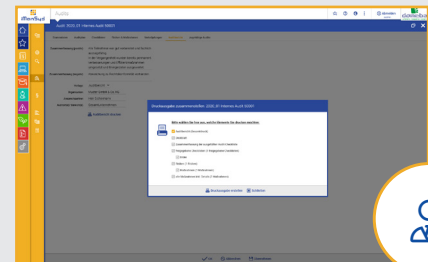

Creating and executing the audit check-list

Access to certificates, documents and qualifications matrix

Creation of audit reports and setting up possible post audits

Executing the actions developed and assigned in the audit
